

Boiler Pipe Work Casing

n-case 'Standard' casings can be used above or below the boiler, providing a simple, quick and cost effective solution for concealing gas and central heating pipe work as well as flues.

Manufactured from lightweight and durable 8mm thick plywood, the single piece 'U' shaped casing is available in either 400mm wide x 200mm deep or 416mm wide x 208mm deep, with optional heights of 295, 495 or 3000mm, which can easily be cut on site.

The casings are self-supporting, so can be free standing or secured using mechanical fixings or mastic adhesives, enabling easy removal for routine servicing or maintenance.

Material thickness: 8mm

Standard length: 295mm, 495mm & 3000mm.

Finishes: White Melamine as standard although other finishes are available in Laminates or real wood veneer.

Custom options are also available. Please contact our sales office with your width, depth, and height of the required casing.
