

Lamina Column Casings

The n-case Lamina column casings range brings a new dimension to column casing design and versatility. Manufactured from high pressure compact laminate, incorporating an integral decorative outer surface, Lamina's inherent properties include a high resistance to wear moisture and fire, as well as the ability to be formed into virtually any column casing shape from circles, squares and rectangles to special ellipses and other custom designs.

Alongside the broad range of standard solid colours patterns and selected prints, additional custom colours and finishes are available to meet specific project requirements.

Lamina casings are particularly well suited to high traffic areas and are already used in a diverse range of retail projects due to their high strength, durability, wear resistance and fire performance.

Material thickness: 5mm

Standard length: 4000mm.

Longer lengths can be achieved using an inner collar to link two column casings together

Finishes: Compact laminate
